Acknowledgement

Receipt is acknowledged of the Amendment filed June 1, 2004.

Reasons for Allowance

Claims 1-8 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Yoshioka, taken alone or in combination of other references, does not teach or fairly suggest a low swing charge recycling circuit comprising, among other things, a static driver including a PMOS transistor and an NMOS transistor which are coupled in series between at least one of (i) a power supply and an output terminal and (ii) a ground and the output terminal (claims 1 and 4); a pass gate network configured to receive the complementary carry input signals, the complementary generate signals and propagate signals and being controlled by the propagate signals to produce a sum signal by applying XOR operation to the complementary carry input signals with the propagate signals; an equalization circuit and a latch circuit (claim 5 and 6); and a voltage swing level of the static driver changes in at least one of (i) from ground level to $V_{dd}-V_{th}$ and (ii) from V_{th} to V_{dd} (claim 8), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
